Kestrel Analytics

Application for Data Analyst Intern

Dear Hiring Team,

I am a final-year B.Tech Computer Science student at Pune Institute of Technology, applying for the six-month Data Analyst Intern role starting in January.

Your posting asks for SQL, Python and the ability to explain what the numbers mean. For my final-year project I built a demand forecast for a local grocery chain from two years of sales data, about 380,000 rows. The model cut forecast error by 22% against their spreadsheet method, and I presented the results to the owners, who now use it to plan weekly orders. I also completed the Google Data Analytics certificate.

I am drawn to Kestrel because your interns work on client projects from the first month. I learn fastest when the work is real, and I would bring the same care I put into that project.

Thank you for your time. My resume is attached, and I would welcome the chance to talk.

Sincerely,

Nandini Rao
